Dr. Brandon Kiefer's wife mysteriously vanishes.

A month later, she inexplicably returns home leading to unanswered questions as to why she deserted the world class scientist.

The rising tension between them triggers flashbacks from his childhood days when he barely escaped his father's murderous rampage. Troubled by his failure to save his younger sister, when he was a ten year old boy, Brandon becomes increasingly obsessed with protecting his closest friends. On the verge of developing the greatest scientific innovation of the 21st century-- the discovery of a medicine to extend the human life span, Kiefer becomes the target in a covert war of international espionage. Will his friends come to his rescue and will those opposed to his controversial genetic intervention join hostile forces to prevent his treatment from becoming available to the public? If he is killed, while being hunted down, the secrets of Project Immortality will be lost forever.
