Galileo Was Wrong: The Church Was Right, Volume I, The Scientific Case for Geocentrism, is a detailed and comprehensive treatise that demonstrates from the available scientific evidence that heliocentrism (the concept that the Earth rotates on its axis and revolves around the sun) is an unproven theory; and that geocentrism (the view that the Earth is in the center of the universe and does not move by either rotation or revolution) is not only supported by the scientific evidence but is admitted to be a logical and viable cosmological position by many of the world's top scientists, including Albert Einstein, Ernst Mach, Edwin Hubble, Fred Hoyle and many more.
