In this monograph that is part of an eight-volume series not sold as a set, Meechan (Newcastle Dental School, UK) shares state-of-the-art knowledge and insights about pain, effective local anaesthesia as a "real practice builder." He gives a tour of basic pharmacology and anatomy before delving into instrumentation, local anaesthetic drugs, techniques for maxillary and mandibular anaesthesia, supplementary techniques, safety, trouble-shooting, and factors influencing the goal of pain anaesthesia. Many of the illustrations are in color. Annotation c. Book News, Inc., Portland, OR
